

League File Installation

Initial Installation:

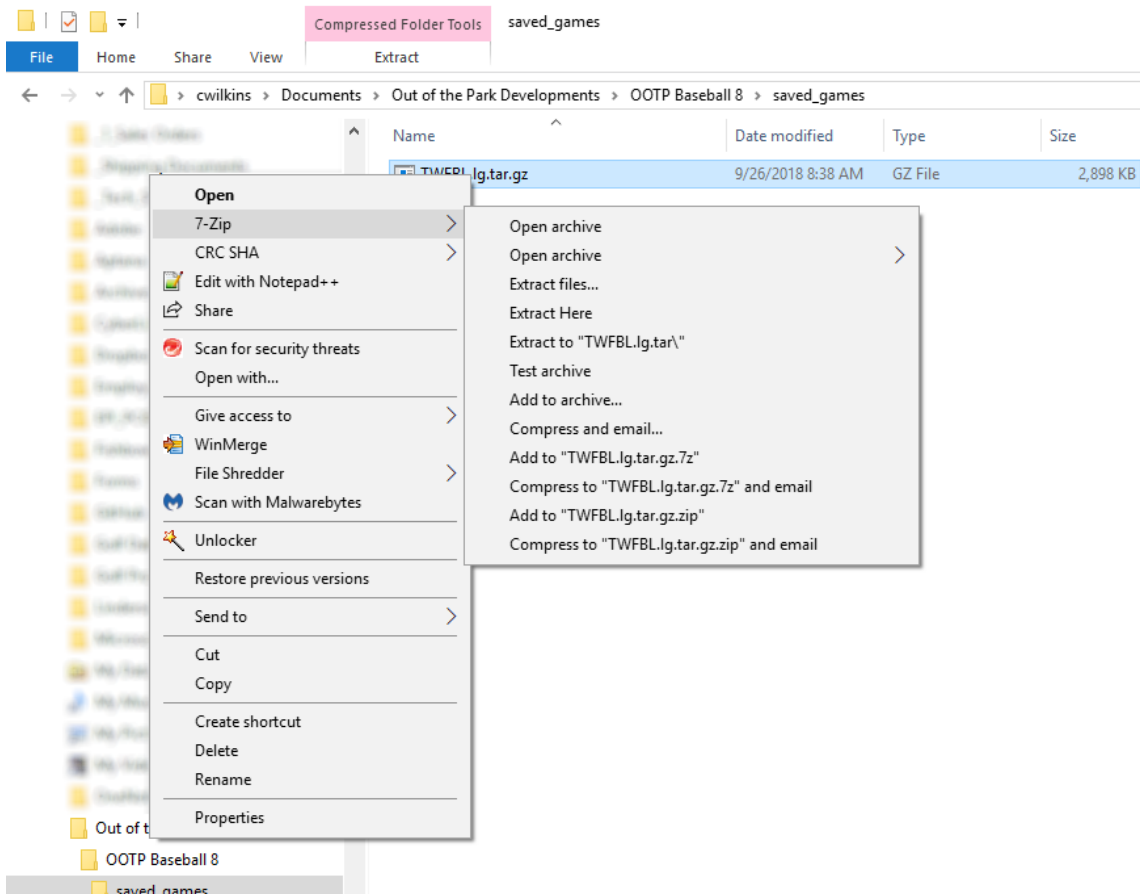

1. Install OOTP 8 software (download is available on the league website)
2. Create League Directory
 - a. Navigate to Documents\Out of the Park Developments\OOTP 8 Baseball\saved_games
 - b. Create a new folder named 'TWFBLL.lg' (without the quotes)
3. Download 7-Zip compression/extraction utility (or any other compression/extraction utility that can handle both tz & gar files.). The following instructions will all be based on 7-Zip

File Download:

1. Download the league file from the website to Documents\Out of the Park Developments\OOTP 8 Baseball\saved_games\TWFBLL.lg
2. File location is posted in the forum available to managers only.

File installation:

1. The file is distributed as TWFBLL.lg.tar.gz (which is how the software creates it, by default)
2. Left-click (once) on the file name to highlight it.
3. Once highlighted, right-click on the file name. Highlight over the 7-zip listing and a menu will appear:

4. From the menu, select 'Extract Here'. When you do this, you'll have a new file called 'TWFLB.lg.tar' (so you have unzipped from the gz format).
5. Now, repeat steps 2-4 for the newly created 'TWFLB.lg.tar' file.
6. This will create all necessary .dat files and folders necessary for the league to run within OOTP 8.
